About us

In Oct 2006, Mr. Ma started his venture in mosaic and tile business with his little savings only. At the time, we supplied products as a manufacturer to big distributors by OEM. By each day our business grew and we became more and more stronger with the support of our clients; we had our own quality control system, sales team, and accounting department... step by step.

In Jan 2015, we hired our first designer and later we built our own design team.

One day, we found a triangle shape from a border and were inspired, then our designers managed to create some patterns and we named them pure color, heart, diamond, flag and so on... Using triangle, we found out that we could create infinite patterns with just 2 colors in 1 sheet. Virtually, it gave us unlimited options in creating new patterns. We were excited about what we came up with and our clients were interested in those also. But after 1 year, there were still no customers to take the risk and distribute the new products.... Then we asked ourselves, since we had confidence in our own designs, "Why don't we push the products to the market by ourselves?" That's how ANT Tile came to life: a brand was born with the sense of creativity...

We are pretty much aware that presenting materials that reflect our ultimate sense of creativity is not an easy task, there are risks involved; what you create might not be understood as you want it to be. Good things happen to people who work hard and wait; we don't expect our products to be accepted by the market in one day. But we hope through our own design and hard work, we could bring more beauty to people, create jobs for our colleagues and give them a better life, contribute to the society and make the world better...
